REACH CERTIFICATION as per July 2021

DELTRON AG, Kirchberg - Switzerland declares that it has fully conformed to the REACH normative no. 1907/2006.

DELTRON AG neither produces nor imports chemical substances (as chemical substances themselves or as components of chemical substances);
In addition, no substances are released under normal and reasonably foreseeable terms of uses.
As a consequence, we are not required to register with the European Chemicals Agency (EChA), or to provide Material Safety Data Sheets (MSDS) for chemical products.

Should a Deltron product contain more than 0.1 weight-% of a substance specified in the list of SVHC (substances of very high concern), we will provide our customers with an adequate information for a safe use of the affected articles. If the quantity of a substance contained in these products exceeds 1 ton/year, we will inform the European Chemicals Agency accordingly.

The list SVHC is published and was updated last on July 8, 2021. It contains a total of 219 substances. According to our current state of knowledge, our products – including components and packing materials – do not contain substances that are part of the list of SVHC in amounts greater than 0.1 weight-%. Neither do we use substances listed in Annex XVII in restricted applications. An exception is the use of lead, CAS 7439-92-1. The substance has been regulated by the RoHS Directive since 2006 and has become part of the SVHC list.

Lead is only used in applications that are declared as exceptions in the EU RoHS Directive and do not impact the safe use of the articles:
Lead as alloying (brass) element in turned or milled metal parts.
The MDS (Material Declaration Sheets) of affected parts declare these applications and are available on request.

Deltron is aware of the duty to communicate information according to REACH and will fulfil it, if it becomes necessary due to new findings or a change of the SVHC list.
